

I oppose Kenwood's request to amend the Amateur Rules to allow thier "Sky Command" remote control system to be implemented on the Amateur 2-meter band. The 2-meter band is already overcrowded in many locations and duplex operations preclude observation of interference. Other VHF/UHF spectrum exists which would serve the purpose of the Kenwood (and similar)equipment and operation(s). The Kenwood remote control system is not a technological advance. Rather, it is an application of existing technology and worthy, only, of secondary importance in the Amateur service. Current Rules are sufficient to accomodate the the kind(s) of operations Kenwood would promote. That Kenwood has already "developed" (sic) equipment is not any reason to proceed with Rule changes, whatever.

Thank you. D. Platt, K3HVG
